September 22, 2010

Dear Bill,

The Lehigh County Conservation District Watershed Program would like to recognize the innovative design and engineering work that Keystone Engineering has done in the area of stormwater Best Management Practices and stormwater basin retrofits. Taking a site-specific, creative approach, Keystone has designed several projects; these designs have won funding for project construction. On several recent projects, working closely with the Conservation District, Keystone has enabled the development and construction of model practices that will result in a significant improvement in water quality to receiving streams. Further, the models will serve as demonstrations for others interested in creating their own retrofit projects. The staff at Keystone Engineering has been responsive and easy to work with. Keystone is to be applauded for their original methods and flexibility in every aspect of the design, permitting, and construction phases. The Lehigh County Conservation District Watershed Program is delighted to have been able to work with Keystone Engineering on these important environmental projects, and hopes to continue to collaborate in the future.

Sincerely,

Rebecca Kennedy  
Watershed Specialist
